

2.2 Stormwater Utility Fee Credits

There are six types of credits available:

1. Site Runoff Rate Reduction (detention basin)
2. Volume Reduction (retention basin, permeable pavement, cisterns, etc.)
3. Water Quality (Best Management Practices – BMPs)
4. Direct Discharge (outside & downstream of the Village's stormwater system)
5. Education
6. Partnership (provide land/facilities to Village to manage stormwater)

2.2.1 Site Runoff Rate Reduction Credit

A credit may be available for applicants who discharge stormwater from all or a portion of their impervious area to a detention basin owned and maintained by the applicant. The detention basin must be designed and comply with all standards and requirements as set forth in Chapter 26 of the Downers Grove Municipal Code.

2.2.2 Volume Reduction Credit

A credit may be available for applicants who own and maintain qualifying stormwater management facilities that reduce the volume of stormwater leaving the property. The stormwater management facility must be designed and comply with all standards and requirements as set forth in Chapter 26 of the Downers Grove Municipal Code. Some volume reduction facilities and activities may also improve the quality of stormwater runoff and as a result an applicant qualifying for a volume reduction credit may also qualify for a water quality credit.

2.2.3 Water Quality Credit

A credit may be available for applicants who own and maintain qualifying stormwater management facilities and activities that improve the quality of stormwater runoff through best management practices (BMPs). The water quality credit may be granted if it is demonstrated that the installed BMPs are designed to remove a minimum of seventy-five percent (75%) of total suspended solids as measured on an annual basis. The suspended solid removal shall be based on the DuPage County Water Quality Best Management Practices Technical Guidance Manual, latest edition. The credit will be calculated based on the portion of impervious area draining to the BMP in the same manner as the site runoff rate reduction credit.

2.2.4 Direct Discharge Credit

A credit may be available to applicants who can demonstrate that all or a portion of their impervious area discharges outside and downstream of the Village's stormwater system. Applicants are required to submit site plans demonstrating the portion of the impervious areas discharging outside the Village stormwater system.

2.2.5 Education Credit

For public and private schools that develop a lesson plan(s) and teach their students about stormwater management issues, the Village may provide an annual credit (per-student instructed) to schools that comply with the requirements.

The allowable education credit will be three dollars (\$3.00) per student taught per year. To remain eligible for this credit, the applicant shall, on an annual basis, provide a copy of the lesson plan(s), demonstrate that the lesson plan(s) is (are) consistent with the educational content deemed appropriate by the U.S. EPA for stormwater education, and provide documentation of the number of students taught that year. This credit is limited to the number of students enrolled in the applicant's school at the time of the application. In no case will the credit exceed one hundred percent (100%) of the total Stormwater Utility fee. The applicant will be required

to submit documents outlined on the Education Credit Application Form, as may be amended from time to time, and any additional information deemed necessary by the Stormwater Administrator.

2.2.6 Partnership Credit

A credit may be offered to applicants that operate in partnership with the Village to improve the overall stormwater system. These partnerships would include applicants who provide land and/or facilities for use by the Village to facilitate the management of stormwater. Applicants who form these partnerships may be eligible for up to one hundred percent (100%) stormwater utility fee credit. The applicant will be required to submit documents outlined on the Partnership Credit Application Form, as may be amended from time to time, and any additional information deemed necessary by the Stormwater Administrator.

2.3 Maximum Credit Amounts

Table 1 presents the maximum credit available for each individual stormwater management activity.

Table 1 - Stormwater Utility Fee Credits

Control Activity	Stormwater Utility Fee Credit
Site Runoff Rate Reduction	Up to 20%
Volume Reduction	Up to 20%
Water Quality	Up to 10%
Direct Discharge	Up to 50%
Education	Up to 100%
Partnership	Up to 100%

Except for Partnerships and Education credits, the maximum aggregate stormwater utility fee credit for any individual parcel is fifty percent (50%) of the gross billing amount regardless of how many individual credits for which the parcel qualifies. **A maximum credit of one hundred percent (100%) of the stormwater utility fee is allowed** for Educational institutions and Partnerships.

The assessment for the control activities and credits must include an evaluation of the portion of the impervious area on the property that drains to the control facility.

An example is provided for clarification:

If 100% of impervious area drains to onsite detention basin(s) then the credit is 20%.
Alternatively, if 80% of the impervious area drains to onsite detention, then 80% times 20% results in a 16% credit of the stormwater utility fee.

It is possible to have stormwater facilities that provide site runoff rate reduction, volume reduction, and water quality control thereby reaching a cumulative fifty percent (50%) credit.

2.4 Stormwater Facility Maintenance

The following stormwater facility maintenance activities are required for an applicant to be eligible for a stormwater utility fee credit. These activities are required to ensure that the facility performs as credited, complies with Village standards and State law, meets safety standards, and is not a public nuisance. Maintenance activities are required on all drainage structures related to the facility, including inlets, headwalls, velocity dissipaters, spillways, pipes, feeder channels, discharge channels, vegetation, etc. The party applying for or receiving a stormwater utility fee credit must demonstrate compliance with all applicable maintenance practices below that are relevant to the stormwater facility.

- * Debris and Litter Removal – Debris and litter removal shall be performed after storm events totaling approximately two inches over a 24-hour period or as needed in order to prevent the structure from clogging and failing and to prevent a public nuisance.
- * Erosion and Structural Repair – Side slopes, emergency spillways, and embankments shall be regraded, revegetated, compacted and/or installed or replenished with rip-rap to correct slumping or erosion problems that develop.
- * Mowing – Side slopes, embankments, emergency spillways, and other grassed areas of stormwater facilities shall be periodically mowed to prohibit woody growth. Native grasses, which are water-tolerant, pest-tolerant, and slow growing, are recommended.
- * No Blockages – Removal of any blockage from pipes, channels, spillways, inlets, and outlets shall be performed as needed to keep the facility in proper working condition.
- * Outlet Control – Maintain outlet control devised to ensure proper functioning in the control of stormwater velocities at the outlet of the stormwater facility. Revegetating and/or replenishing or reinstalling rip-rap may be required to correct erosion problems at the outlet of stormwater facility pipes.
- * Removal of Log Jams and Debris – All streams and ditches within the private stormwater facility shall be inspected periodically for blockages. If identified, the blockages and debris shall be removed as quickly as practicable.
- * Sediment Removal – Removal of sediment shall be performed as needed (or as required by the Village) to ensure proper working order of the facility and its related stormwater facility features (channels, pipes, etc.).
- * Structural Repairs and Replacement – Eventually, stormwater control structures will deteriorate and must be replaced. Structural damage to outlet structures (i.e. cracks, leaks, or failure) shall be repaired as soon as possible.

2.5 Annual Documentation Submittal for Credits

Between April 1st and April 30th of each year documentation must be submitted to the Village to continue receiving a credit. The required documentation consists of the following:

- * Recently dated photographs showing the condition (including any known damage or disrepair) of a stormwater facility. For basins, these photos should include views where applicable of the outlet structure, all side slopes, vegetated shoreline zones, emergency spillway, overflow routes, and areas designed to catch sediment.
- * Records demonstrating that required maintenance activities and/or repairs have been completed.

Failure to submit the required documentation will result in the credit being forfeited. Reinstatement of a credit will require a full application submittal and fee.

2.6 Credit Renewal

Stormwater utility fee credits are provided for up to a maximum period of five years, subject to the requirements previously identified in this Manual. In order to continue to receive the credit in future years, the applicant is required to submit a new stormwater credit application by October 1st of the fifth year. It is the responsibility of the recipient to submit a new stormwater application along with the required documentation and fee to the Village and to do so in a manner that insures that the credit remains continuous. If the new application is not submitted, the credits will cease on October 1st of the fifth year and not be reinstated until the new application, required documentation and associated fee is submitted and approved.

3.0 Incentives

3.1 Eligibility for Incentives

A one-time incentive may be available for the purchase, construction, and installation of qualifying stormwater management facilities. In order for an applicant to be eligible to receive a stormwater utility fee incentive, an applicant must receive a Stormwater Utility bill from the Village. Incentives are offered on a first-come, first-served basis dependant upon available funds allocated by the Village Council. The applicant will be required to submit documents outlined on the appropriate [Stormwater Utility Fee Incentive Application Form](#) and any additional information deemed necessary by the Stormwater Administrator.

3.2 Stormwater Facility Incentives

The following stormwater management facilities may be eligible for stormwater incentive funding:

3.2.1 Rain Barrels

Rain barrels are structures designed to intercept and store runoff from rooftops and thereby reduce peak stormwater discharge rates from properties. Stored water can be used to water gardens or lawns. A minimum rain barrel volume of forty-five (45) gallons is required and the maximum incentive per property is twenty-five dollars (\$25).

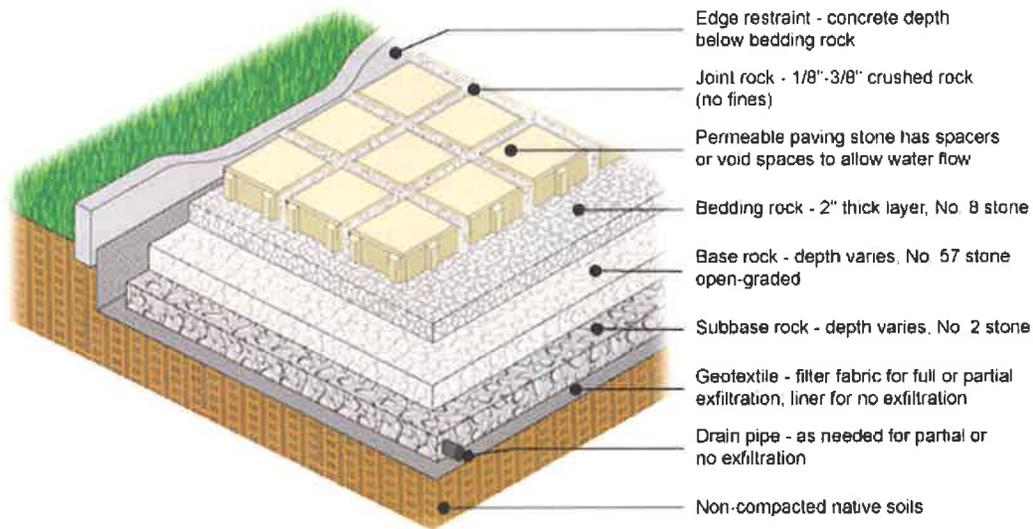

3.2.2 Rain Gardens

A rain garden is a shallow depression that is planted with deep-rooted native plants and grasses. Rain gardens are positioned near a stormwater source such as a roof drain, driveway, or sump pump location. Rain gardens reduce the peak stormwater discharge rates, the overall stormwater volume and improve stormwater quality by settling out suspended solids. Applicants who install rain gardens may be eligible for an incentive of three hundred dollars (\$300) per property. In order to qualify for the incentive, the rain garden must be a minimum of one hundred (100) square feet in size. Information on rain garden design and construction is available on the Village's website.

3.2.3 Permeable Pavement

Permeable pavement is another tool to reduce stormwater runoff, and it can reduce flooding, increase water infiltration, recharge groundwater and improve water quality. The key to achieving the infiltration is to make sure subbase aggregate thickness is designed to accommodate the subsoil conditions and anticipated loads. Applicants who install permeable pavement may be eligible for an incentive of three hundred dollars (\$300) per property. In order to qualify for the incentive, the permeable pavement must be a minimum of one hundred (100) square feet in size and installed on a subbase designed in accordance with the manufacturer's recommendations. The following is an example for illustrative purposes:

3.2.4 Other Facilities

Applicants who install other pre-approved stormwater facilities that reduce the total volume of stormwater, reduce the peak volume of stormwater and / or improve the quality of stormwater leaving the property may be eligible for an incentive for the costs of materials and construction of the stormwater facility up to a maximum of two hundred fifty dollars (\$250) per property. Examples of such stormwater facilities include green roofs, cisterns, dry wells and other Best Management Practices.

4.0 Grant Program

4.1 Eligibility for Grant

The purpose of the Grant Program is to encourage church properties to proactively manage stormwater by incorporating sustainable stormwater management practices on their property that may in turn make them eligible for a Credit or Credits within the guidelines of this Manual. Projects that reduce the negative impact of development on the drainage system, such as reducing impervious areas, will also be considered for the Grant Program.

In order for an applicant to be eligible to participate in the Grant Program, the applicant must be recognized as a Church and meet the requirements of section 501(c)(3) of the Internal Revenue Code, must be within the corporate limits of the Village, and receive a Stormwater Utility bill from the Village.

Grants are offered on a first-come, first-served basis dependant upon available funds allocated by the Village Council. A maximum of 75% of the cost would be reimbursed to the applicant, up to a maximum of five thousand dollars (\$5,000) for design and twenty thousand dollars (\$20,000) for construction of the improvements. The applicant's share (25% of the project cost) could include in-kind donations of labor, materials, and services. A reimbursement will be paid to the applicant after the completion and final permit acceptance of the approved Grant Program improvements. An applicant may be eligible to apply for and receive funding assistance on an annual basis of up to a maximum reimbursement of twenty-five thousand dollars (\$25,000) per the Village's fiscal year. The applicant will be required to submit documents outlined on the appropriate [Grant Application Form](#) and any additional information deemed necessary by the Stormwater Administrator.

4.2 Pre-application Meeting

A pre-application meeting with the Stormwater Administrator and the applicant will be required to discuss the proposed work prior to submittal.

5.0 Administration

5.1 Right-of-Entry and Facility Inspections

As a condition of receiving a stormwater utility fee credit or incentive, the owner of the parcel that contains the stormwater facility must agree to allow the Village unrestricted access to inspect the facility associated with the stormwater utility fee credit or incentive. Each applicant that has received a credit for a stormwater facility has the responsibility to inspect and repair their facility to ensure that it is functioning as credited. In addition, the Village reserves the right to inspect stormwater facilities receiving a credit or incentive at any time in order to verify that the facility is being maintained in accordance with Village Code standards, and that the condition of the stormwater facility is consistent with the documentation submitted by the stormwater utility fee creditor incentive recipient, and that the facility is operating as intended. If the field inspection proves that any of the annual documentation submitted for continuation of the credit is not accurate, or the facility is not maintained, or the facility is not operating as credited, then the credit will be forfeited. The party receiving the credit may be billed by the Village for credits improperly received.

5.2 Application Procedure for Credit or Incentive

An applicant will be required to submit documents outlined on the appropriate Stormwater Utility Fee Credit or Incentive Application Form, as may be amended from time to time and any additional information deemed necessary by the Stormwater Administrator. A three hundred dollar (\$300) non-refundable application fee must also be submitted with a Credit Application (not applicable for an Incentive Application).

The Stormwater Administrator will review the application for a credit or incentive, and will either grant or deny the requested credit or incentive within forty-five (45) days of receipt of a completed application and payment of any applicable fees.

An awarded credit or incentive will be applied to the applicant's next regularly generated bill after approval of the credit or incentive. If the application is denied, a letter explaining reasons for the denial will be provided to the applicant. The applicant has the right to appeal this decision in accordance with the procedures outlined in Chapter 25 of the Downers Grove Municipal Code.

Applicants with past-due balances owed to the Village shall not be eligible to receive a stormwater utility fee credit or incentive.

5.3 Indemnification

In consideration for permission to construct, maintain, or install a stormwater facility, and by nature of applying for a stormwater utility fee credit or incentive, the applicant is hereby legally acknowledging and agreeing to the following:

After completion of the construction, maintenance, or installation by the applicant and approval by the Village, the construction, maintenance, or installation of a stormwater facility shall remain privately owned and maintained. It shall not be accepted by the Village, and shall not become a part of the maintenance program of the Village of Downers Grove Stormwater Utility. All maintenance responsibility and liability shall be and remain with the applicant, his personal representatives, heirs, grantees, successors and assigns.

Applicant, his personal representatives, heirs, grantees, successors and assigns shall indemnify and hold harmless the Village of Downers Grove, its officers, agents, and employees from any and all claims, actions, causes of action, judgments, damages, losses, costs, and expenses (including attorney's fees) arising out of or resulting from the construction, maintenance, installation, or operation of the stormwater facility.

This indemnification provision shall run with the real estate upon which the stormwater facility has been constructed or installed and shall be binding upon the applicant, his personal representatives, heirs, grantees, successors and assigns so long as the stormwater facility or any part of it shall be used by them. This provision

shall be disclosed upon transfer of real estate. At such time as the stormwater facility shall cease to be so used, this provision shall immediately terminate.

5.4 Appeals

A parcel owner who is aggrieved by the classification of the parcel, the amount of impervious area, the calculation of the stormwater utility fee, or by the denial of a credit or incentive application may appeal the classification, calculation or denial in accordance with the provisions set forth in Section 25.69 of the Downers Grove Municipal Code.

5.5 Questions

For questions regarding the Credit or Incentive Applications, Contact:

Stormwater Utility Fee
Education Credit Application Form

Stormwater Utility users may be eligible for an ongoing credit for the education of students in the field of stormwater. This form and all requested information shall be submitted to the Department of Public Works in order to initiate a Credit review.

GENERAL INSTRUCTIONS

This credit is only available to public and private schools providing a curriculum that includes education on stormwater quality & pollution prevention. The credit represents a once-per-year credit, and must be applied for on an annual basis. The Applicant must include the minimum following materials with this application:

- Copy of lesson plan(s) used to educate students on stormwater quality & pollution prevention
- \$300 non-refundable application fee
