

COUNCIL WORKSHOP ITEM

ITEM: Stormwater Presentation
DATE: October 2, 2002
PREPARED BY: John J. Bajor, Jr., Director of Public Works
PURPOSE: Informational

DISCUSSION:

Over the past several months the Public Works Stormwater Division has experienced an exceptional increase in workload while realizing a loss of a full-time stormwater engineer.

The increase in workload has been attributable to an increase in stormwater permit applications and additional work requirements including special stormwater complaints and other program activities in response to IEPA Program requirements. In addition to this we have been actively working to address past probationary items in order to regain normal status and maintain our full-waiver status.

The Stormwater Division of the Public Works Department will present an informational summary report regarding the current status of village stormwater permit applications, staffing and special stormwater projects. Staff wishes to essentially describe the manner in which we have addressed the workload and maintain service to the public.

The presentation is informational and is intended to provide the Council with a description of the business matters confronting the stormwater division and the manner in which we addressing those business matters.
